

# Abdullah Shahzad

---

Hello, my name is Abdullah Shahzad. I'm a 17-year-old homeschooled, self-taught web developer with a strong focus on Django and Python. I've built several projects featuring CRUD functionality, authentication, a real-time chat application, and a social media platform, among others.

I'm eager to learn and constantly improve my skills. Feedback on my work is always welcome—it motivates me to grow and do better. I also use generative AI to debug and optimize my code, saving time and enhancing efficiency.

I'm open to taking on tasks or tests to demonstrate my skills and am highly flexible with working hours. While I prefer remote work, I'm currently looking for a full-time position to gain real-world experience and further refine my expertise.

I'm excited to join a team that values doing the right thing, embraces innovation, and thrives on brainstorming new and better ideas.

---

## Projects:

### 1. Blogging Website

- ☒ Implemented CRUD functionality
- ☒ User authentication and authorization

### 2. E-commerce Website

- ☒ User authentication and authorization
- ☒ CRUD operations for products and user profiles
